DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 39-60 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-31 of U.S. Patent No. 6,200,874. Although the conflicting claims are not identical, they are not patentably distinct from each other because they are both directed to a method for use with the formation of a capacitor in an integrated circuit structure including forming an ozone enhanced oxide layer over at least a portion of the second electrode, and subjecting the structure to thermal cycling during one or more fabrication process, wherein the ozone enhanced oxide material provides oxygen atoms during the thermal cycling to the dielectric material such that the initial oxygen concentration of the dielectric material is substantially maintained during the thermal cycle.

It would have been obvious to one of the ordinary skill in the art to recognize that the method for use in forming a memory cell having capacitor in claim 27 of the patent is broad enough to include an integrated circuit structure as in the instant claim.
